

LoopCloud

Connect. Manage. Integrate.

LoopCloud is the most secure industrial IoT platform that lets you get the most out of your business and prepare you for the next industrial revolution in Industry 4.0.

 | Bridging The Gap
For IoT.

loopCloud

Connect. Manage. Integrate

Securely connect and manage any type of hardware, device, sensor or machine, while harnessing extensive control at scale for all your IoT projects and deployments.

Device Connectivity

Connect just about any type of device, sensor or machine. Data is normalized across all types of devices so your data structures remain consistent across all your connected devices and projects.

Embedded Devices

Industrial Gateways

IoT Devices

Remote health monitoring for deployed devices.

OTA Updates.

Secure Mass Deployment Mechanism with LWM2M bootstrap

Smart Alerting via Email, SMS, & webhooks

Multi-Tenancy with granular project and role based control

Remote access to IoT devices without IT configurations.

Next-gen IIoT Management

An extensive product lifecycle IIoT management suite for complex IIoT deployments by large scale enterprises, industrial OEMs and System integrators, driven by LWM2M and OneM2M standards. Have complete control and management of connected field devices to take action immediately when needed.

Fully Integrated IoT Platform

LoopCloud not only includes extensive management, but also the ability to create end solutions with a scalable database, visualization & analytics engine and integrations to many 3rd party enterprise systems.

Works Together

Our LoopEdge platform was designed to integrate perfectly with LoopCloud, providing connectivity to an exhaustive list of industrial protocols and systems, edge processing, analytics, and cloud connectivity for all of your legacy devices.
